1. Reminders

1.1 Metrological Legislation
Because of metrological legislation, some metrological parameter settings are limited to be done by authorized personnel only. Do not attempt to change any parameters under internal function number F60 ~ F99. Contact your dealer for installation and technical assistance.

1.2 Seal & Serial Number
This instrument is legal for trade only when it is sealed (and/or stamped) and bearing a serial number. Do not attempt to break the seal (or stamp) or serial number affixed to this instrument. No warranty service will be provided if the seal (or stamp) or data plate affixed to this instrument is damaged or removed. Always contact your dealer for after sales service.

1.3 Warm Up Time
a. Allow warm up period of not less than 60 seconds before calibration and usage. The higher the setup resolution of the scale, the longer the warm up period is required. In most cases, 120 seconds is a safe warm up period for all applications. This warm up period is needed to energy all components to reach a stable status.

b. The internal count value is deemed stable when the internal AD count varies less than 3 counts within 2 seconds.

c. To read the internal AD count value, enter internal function F1. The internal AD count value of a not yet fully energized PCB will go up continuously.

1.4 Placing the Instrument
In order to obtain an accurate weighing result, this instrument must be placed on a strong and level surface. Avoid using this instrument in any environment where excessive wind flow, vibration and extreme temperature change exist.

1.5 Cautions
a. The instrument is not an explosion proof device.

b. The instrument is not a water proof device.

c. Do not open the instrument, no user serviceable parts inside. Always contact your dealer for service.
d. Do not place this instrument in where shock, excessive vibration or extremes of temperature (before or after installation) exist.

1.6 Support & Service
Always contact your dealer for product information, after sales service and questions when in doubt.

*In the interest of improvement, specifications may change prior to notice*

** Dual weighing range model.  
** OIML approved models.
3. Keys, Display & Connection Points

3.1 Keys & Display Indicators

1. **[ON/OFF] Key**
   Press this key to turn this instrument on or off.

2. **[CHECK] Key**
   - When in operation mode: - to start check function and to enter value for Lo and Hi Limit.
   - When in setting mode: - quick access to label settings.

3. **[FUNC/SET] Key**
   - Short Press = FUNC: - to shift between weighing, piece count, auto tare memory and animal weighing\(^1\) mode.
   - Long Press = SET
     a. to prompt/introduce an operation parameter/value during piece count, action-tare-accumulation and animal weighing mode.
     b. when in weighing mode: - to access internal function setting mode (F1~F29)

4. **[MR/UNIT] Key\(^2\)**
   - Short Press = MR: - to recall total stored transactions.
   - Long Press = UNIT: - to shift among various weight units (if weight unit conversation is enable).

5. **[TARE] Key**
   To tare off the weight of a container.

---

1 Depends on F11 setting.
2 Refer to F9 on how to enable/disable weight units.
6. **[ZERO] Key**
To set weight displayed to zero when unloaded.

7. **[PRINT/M+] Key**
To send print data out and/or accumulate current value to memory\(^3\).

8. **[CE/x10] Key**
To clear value entered during setting process, or to trigger the extended display mode\(^4\).

9. **[Numeric Key]**
Numeric keys 0~9.

10. **Reserved**

11. **Reserved**

12. **Weighing Range Indicator**
   - **W\(_1\) Indicator\(^5\):** - (When under dual weighing range/interval mode)
     Visible when this instrument is operating at the first weighing range (W\(_1\)).
   - **W\(_2\) Indicator\(^6\):** - (When under dual weighing range/interval mode)
     Visible when this instrument is operating in the second weighing range (W\(_2\)).

13. **Minus Indicator**
Visible when a negative value is displayed.

14. **Gross/Net Indicators**
   - **G:** - Visible when gross result is being displayed.
   - **Net:** - Visible when net result is being displayed.

---

\(^3\) Refer to F16 and F17 settings for details.

\(^4\) When F68 = OIML or NTEP.

\(^5\) Not visible when single range is selected.

\(^6\) This indicator will not appear when this instrument is in single range mode.
15. **Stable Indicator**
Visible when weight value is stable.

16. **Zero Indicator**
Visible when instrument is at zero status.

17. **M+ Indicator**
Visible when memory contains accumulated data.

18. **Preset Tare Indicator**
Visible when preset-tare value has been entered.

19. **Weight Unit Indicators**
kg = kilogram; g = gram; lb = pound.

20. **Counting Function Indicators**
- PCS = Pieces (Piece Count Mode in function).
- kg/PCS, g/PCS and lb/PCS = Weight per piece (when Piece Count Mode in function).

21. **Numeric & Alphabetical Info Panel**
Numeric value and alphabetical Info are shown here.

22. **Battery Power/Level Indicator**
Visible to show:
- When instrument is powered by built-in rechargeable: - remaining battery of the built-in rechargeable battery.
- When instrument is powered by external power adaptor: - Battery rechargeable recharging status.
3.2 Connection Points

A. DC Jack Input
External power adaptor (DC9 ~ 12V) is plugged in here.

B. Comport 1\(^7\)
Comport 1 (serial or TTL).

C. Comport 2\(^8\)
Comport 2 (serial).

D. Battery Compartment

E. Under Pan Weighing Access Hole
Access hole for under pan weighing hook, thread size = M4 x 0.7.

4. Power & Comports
4.1 Power Adaptor
Always use the power adaptor supplied together with this instrument to avoid un-recoverable damages to this instrument.

Notes: -
- When an energized power adaptor is plugged in, this instrument will power on automatically.
- Minimum backlight will remain lit on when an energized power adaptor is plugged in even this instrument is switched off.

\(^7\) Settings of comport #1 is done through F16.
\(^8\) Settings of comport #2 is done through F17.
4.2 Built-In Rechargeable Battery
Before first time use, recharge the built-in batter for at least 8 hours to ensure the best battery performance.

4.3 Comports on Instrument
There are 2 built-in comports on this instrument: -

- Comport 1 can be used for serial or TTL communication depends on the jumper setting of the Serial/TTL selection jumper. Default setting = serial. Contact your dealer in case TTL output is required for Comport 1.
- Comport 2 supports only serial communication.

Both comports support bi-directional communication when set as PC and CMD modes. Refer to 5.5 for setting details.

<table>
<thead>
<tr>
<th>Comport 1 (male)</th>
<th>Comport 2 (female)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 = RXD</td>
<td>2 = TXD</td>
</tr>
<tr>
<td>3 = TXD</td>
<td>3 = RXD</td>
</tr>
<tr>
<td>5 = GND</td>
<td>5 = GND</td>
</tr>
<tr>
<td>9 = DC 5V Output</td>
<td>Nil</td>
</tr>
</tbody>
</table>

4.4 Comports Pin Assignment
Refer to below table for pin assignment between this instrument and a computer or serial printer.

Comport pin assignment on instrument

Notes: -
- Comport 1 is assigned as DTE and has a male connector.
- Comport 2 is assigned as DCE and has a female connector.
5. Initial Setup

There are 2 groups of internal function:

- **Group #1:** F1~F30 are accessible without restriction.
- **Group #2:** F60~F99 are restricted functions which request a password or hardware key to access. These functions are for dealer and authorized personnel only. Do not change any settings of these functions to avoid operation errors.

Below paragraphs describe those settings related to F1~F30.

5.1 Internal Functions & Settings

Application parameters can be checked and set through internal function. Set all preferred operation parameters according to 5.4.

5.2 How to Enter & Select Internal Function

Follow the below procedures for internal function setup:

1. In weighing function, press and hold [FUNC/SET] until instrument displays F1 and is now in internal function mode.
2. Release [FUNC/SET].
3. Press [FUNC/SET] and [MR/UNIT] to access the preferred internal function number.
4. Quick access to a function number:
   - Press [6] to go to F60 (for dealer and authorized personnel only).
   - Press [8] to go to F80 (for dealer and authorized personnel only).
   - Press [9] to go to F99 (for dealer and authorized personnel only).
   - Press [0] to go to F1.

---

9 Internal function mode can only be accessed when instrument is in weighing mode.
10 To fulfil the metrology law of certain countries, accessing to internal function by [Set] may be disabled. Contact your dealer for more information.
### 5.3 Key Function under Internal Function Mode

<table>
<thead>
<tr>
<th>Key</th>
<th>Function in Setup &amp; Calibration</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ON/OFF]</td>
<td>Quit without saving and power off</td>
</tr>
<tr>
<td>[FUNC/SET]</td>
<td>Go to next page</td>
</tr>
<tr>
<td>[MR/UNIT]</td>
<td>Go to previous page</td>
</tr>
<tr>
<td>[TARE]</td>
<td>Set F1 value being shown to zero and to display the net span gain of additional load applied</td>
</tr>
<tr>
<td>[ZERO]</td>
<td>Quit without saving</td>
</tr>
<tr>
<td>[PRINT/M+]</td>
<td>Enter, save and return</td>

</tr>
<tr>
<td>[CHECK]</td>
<td>Quick access to label settings</td>
</tr>
</tbody>
</table>

### 5.4 Internal Function Table

Refer to the below tables for internal function number, parameter and setting notes.

<table>
<thead>
<tr>
<th>Function No.</th>
<th>Description</th>
<th>Parameters/Note</th>
</tr>
</thead>
</table>
| F1           | Internal Analogue to Digital (ad) Value | Press [TARE] to set offset value to zero when unloaded. Then add load on the platform to observe the span value of load applied.  
- When ADC is more than 1 million. \( W_1 \) sign will appear. Actual ADC is \( = 1 \) million plus the ADC value being displayed.  
- When ADC is more than 2 million. \( W_2 \) sign will appear. Actual ADC is \( = 2 \) million plus the ADC value being displayed.  
- When ADC is more than 3 million. Both \( W_1 \) & \( W_2 \) signs will appear. Actual ADC is \( = 3 \) million plus the ADC value being displayed.  
Press [ZERO] to quit to F1. |
| F2           | All Segment                          | All display segments and backlight colors will be lit on. Check any |
### F3 Capacity, Division & Default Weight Unit

Display basic metrology characteristics (capacity, division and weight unit). Value displayed = Max + 1e

### F4 Date Format & Date

<table>
<thead>
<tr>
<th>Format</th>
<th>DD/MM/YY</th>
<th>** YY/MM/DD</th>
<th>MM/DD/YY</th>
</tr>
</thead>
</table>

Press `[PRINT/M+]` to check current date value. To change date value, enter date value and then press `[PRINT/M+]` to confirm.

### F5 Time

HH/MM/SS

To change time, press `[PRINT/M+]`, then enter a new value and press `[PRINT/M+]`.

### F6 System Initialization (Set F7~F30 to Default)

<table>
<thead>
<tr>
<th>Setting</th>
<th>** NO</th>
<th>YES</th>
</tr>
</thead>
</table>

If YES is selected, press [1] when “SURE ?” is displayed. Indicator shows Done when initialization is completed.

### F7 Auto Power Off Time (Minute)

<table>
<thead>
<tr>
<th>Setting</th>
<th>OFF</th>
<th>1</th>
<th>3</th>
<th>** 5</th>
<th>10</th>
<th>20</th>
</tr>
</thead>
</table>

Auto power off function will be disabled when an energized power adaptor is pulled in.

### F8 Backlight Brightness

**Default = 60**

- To change setting, enter value through numeric keys and then press `[PRINT/M+]`.
- Set brightness (bt) first, then set color ratio. Color ratio is used to generate the preferred yellow color.

When instrument is powered by built-in rechargeable battery, backlight will be turned to minimum when battery is low or when weight value remains unchanged for 5 seconds.

### F9 Weight Unit Enable/Disable

<table>
<thead>
<tr>
<th>Unit</th>

- AtM (Action Tare Memory) / On/** Off
- Ani (Animal) / On/** Off
- PCd (Quick Access to Customer / Product Code Setting) / On/** Off

### F12 Auto Tare Function

- **OFF**
- ON
- Contin

**Notes:**

- Off = Auto Tare Function disable.
- On = Only the first table weight applied will be tare off. Minimum tare load ≥ 2d.
- Contin = All stable weight applied will be tare off. Minimum tare load ≥ 10d.

### F13 Repetitive Tare Function

- **OFF**
- ON

If F12 is set = Contin, Repetitive Tare setting “Off” will be surpassed.

### F14 Buzzer

- Kb (keypad buzzer) (**On/Off)
- St (System buzzer) (**On/Off)

### F15 Check Result Buzzer

- OFF
- **IN**
- OUT
- Hi
- Lo

- OFF = Check Buzzer disabled.
- IN = Check Buzzer activates when reading is within range.
- OuT = Check Buzzer activates when reading is out of range.
- Hi = Check Buzzer activates when reading more than Hi limit.
- Lo = Check Buzzer activates when reading lower than Lo limit.

### F16 Set Comport 1

- Off
- Auto 1
- Auto 2
- Auto 3
- Manual
- **PC**

Scanner only
Refer to F17 for details

### 5.5 Setting Comport 1 & Comport 2

2 comports are on this instrument. Default setting for both comports = serial. Contact your dealer in case of TTL output is required for Comport 1. Following the below procedures to setup comports.

1. Go to F16 or F17.
   - F16 is used to configure Comport 1.
   - F17 is used to configure Comport 2.

2. Press [FUNC/SET] or [MR/UNIT] to shift among parameters Off, PC, Scanner (Comport 1 only), CMD (Comport 2 only), Auto1, Auto 2, Auto 3 and Manual.

**Notes:**

- Off = Comport disable. Select this when a particular comport is not used.
- PC & CMD is data string related modes.
- Auto 1, Auto 2, Auto 3 and Manual are print related modes.
- When both ports are set to data string related modes, [PRINT/M+] key is used as M+ (memory accumulation) and can only be activated when value is stable and ≥ 20d.
• If both comports are set to print related mode (e.g. comport 1 is set to Auto 1, comport 2 is set to Auto 2) and at the same time Auto memory accumulation is selected by both modes, then Auto memory accumulation serves only comport 1.

3. Select the preferred output type parameters then press [PRINT/M+] to save.

4. At this point: -
   • If PC is selected, refer to 5.5.1 for setting details.
   • If CMD is selected, refer to 5.5.2 for setting details.
   • If Manual is selected, refer to 5.5.3 for setting details.
   • If Auto 1~3 is selected, refer to 5.5.4 for setting details.
   • If Scanner is selected, refer to 5.5.5 for setting details.

5.5.1 When comport is set as PC

1. Instrument displays baud rate. 9 parameters (1200~256000) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

2. Instrument displays Parity. 3 parameters (None, odd, even) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

3. Instrument displays Data length. 2 parameters (7, 8) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

4. Instrument displays output protocol type. 9 parameters (Prot 1~9) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

5. Instrument displays time interval (in second) between each output. 10 parameters (0, 0.5, 1, 1.5, 10, 30, 60, 90, 120, and 300) are available. 0 = continuous output. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

6. At this point, PC setup is completed.

5.5.2 When comport is set as CMD

1. Instrument displays baud rate. 9 parameters (1200~256000) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.
2. Instrument displays Parity. 3 parameters (None, odd, even) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

3. Instrument displays Data length. 2 parameters (7, 8) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

4. At this point, CMD setup is completed.

5.5.3 When comport is set as Manual

1. Instrument displays baud rate. 9 parameters (1200~256000) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

2. Instrument displays Parity. 3 parameters (None, odd, even) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

3. Instrument displays Data length. 2 parameters (7, 8) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

4. Instrument displays Auto Accumulation. 2 parameters (on, off) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

   - On = when pressing [PRINT/M+] during normal operation, the instrument does print and M+ at the same time.
   - Off = when pressing [PRINT/M+] during normal operation, the instrument does print only.

5. Instrument displays Check Control. 2 parameters (on, off) are available. By default, print data will only be transmitted under all auto print modes. Press [PRINT/M+] to save.

   - On = (When check function is in effect) Only OK value (value which is within Lo and Hi Limits) will be transmitted.
   - Off = (When check function is in effect) Check requirement is disable.

6. Instrument displays Stability control. 2 parameters (Yes, no) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

   - Yes = [PRINT/M+] (during normal operation) will only function when the weight is stable.
• No = [PRINT/M+] (during normal operation) will always function disregarding the stable condition of the weight when [PRINT/M+] is pressed.

7. Instrument displays minimum output weight. 21 parameters (0d~20d) are available. Instrument will not generate any output if the actual weight is less than the minimum output weight selected here. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

8. Instrument displays print format. 5 parameters (Lab 1, Lab 2, Lab 3, LP-50 and TSC). Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

- Lab 1 = Output in Landscape direction. If Lab 1 is selected, refer to 5.5.3.1 for other settings.
- Lab 2 = Output in Portrait Direction. If Lab 2 is selected, refer to 5.5.3.2 for other settings.
- Lab 3 = Database output mode.
- LP-50 = Output to LP-50 label printer. Refer to 5.5.3.3 for other settings.
- TSC = Output to TSC label printer. Refer to 5.5.3.3 for other settings.

5.5.3.1 Other settings if Lab 1 is selected

a. Instrument displays Line number. Line number is the number of lines in between which the report heading is repeated. Line number should be from 00~99. 00 means no header output. Input the desired line number then press [PRINT/M+] to save.
b. At this point, Lab 1 setup is completed.

5.5.3.2 Other settings if Lab 2 is selected

a. Instrument displays number of copy to generate each time. 8 parameters (1~8) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.
b. At this point, Lab 2 setup is completed.
5.5.3.3 Other settings if LP-50/TSC is selected

a. Instrument displays number of copy to generate each time. 8 parameters (1~8) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

b. Instrument displays label file number (FL1 01 ~ FL1 99) to print in label format group 1. Press [FUNC/SET] or [MR/UNIT] until the preferred label file number appears then press [PRINT/M+] to save.

c. Instrument displays label file number (FL2 01 ~ FL2 99) to print in label format group 2. Press [FUNC/SET] or [MR/UNIT] until the preferred label file number appears then press [PRINT/M+] to save.

d. At this point, LP-50/TSC setup is completed.

5.5.4 When comport is set as Auto (Auto 1~3)

1. Instrument displays baud rate. 9 parameters (1200~256000) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

2. Instrument displays Parity. 3 parameters (None, odd, even) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

3. Instrument displays Data length. 2 parameters (7, 8) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

4. Instrument displays Auto Accumulation. 2 parameters (on, off) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.
   - On = Auto memory accumulation enable. Instrument will accumulate the printed value to memory.
   - Off = Auto memory accumulation disable.

5. Instrument displays Check Control. 2 parameters (on, off) are available. By default, print data will only be transmitted under all auto print modes. Press [PRINT/M+] to save.
   - On = (When check function is in effect) Only OK value (value which is within Lo and Hi Limits) will be transmitted.
Off = (When check function is in effect) Check requirement is disable.

6. Instrument displays Stability control. 2 parameters (Yes, no) are available. **By default, only stable value will be transmitted under all auto print modes.** Press [PRINT/M+] to save.

7. Instrument displays minimum output weight. 21 parameters (0d~20d) are available. **By default, only stable value which is ≥20d under all auto print modes.** Press [PRINT/M+] to save.

8. Instrument displays print format. 4 parameters (Lab 1, Lab 2, LP-50 and TSC). Instrument will not generate any output if the actual weight is less than the parameter weight selected. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

   - Lab 1 = Output in Landscape direction. If Lab 1 is selected, refer to 5.5.3.1 for other settings.
   - Lab 2 = Output in Portrait Direction. If Lab 2 is selected, refer to 5.5.3.2 for other settings.
   - LP-50/TSC = Output to LP-50/TSC label printer. If LP-50/TSC is selected, refer to 5.5.3.3 for other settings.

9. At this point, Auto (Auto 1~3) setup is completed.

5.5.5 When Comport 1 is set as Scanner

1. Instrument displays baud rate. 9 parameters (1200~256000) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

2. Instrument displays Parity. 3 parameters (None, odd, even) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

3. Instrument displays Data length. 2 parameters (7, 8) are available. Press [FUNC/SET] or [MR/UNIT] until the preferred parameter appears then press [PRINT/M+] to save.

4. At this point, scanner setup is completed.
6. Basic Operations

6.1 Power On, Inputting Operator Number & Power Off
To power on instrument, press [ON/OFF] for 0.5 second.

After powered on, instrument will display software number, software revision, all display segments, calibration count value and parameter set count value.

At this point, depends on internal function number F28 setting, instrument may ask for operator number input. If this is the case:
- Input 4-digit operator number, or
- Press [CE/x10] then [Print/M+] to skip operator number when oP appears.

After above, the instrument will go to the last working mode before powered off and is ready for operation.

To power off instrument, simply press [ON/OFF].

6.2 Warm Up Time & Set Weight to Zero When Unloaded
It is important to allow the instrument enough warm up time. This is especially important when this instrument is running at high resolution (e.g. 6000d or higher) application. Refer to 1.3 for details.

If zero result is not obtained when unloaded, press [ZERO] to set weight displayed to zero.

6.3 Keyboard Lock
When keyboard lock is enabled, only [ON/OFF], [ZERO] and [TARE] can function. Refer to F20 on 5.4 for keyboard lock settings.

6.4 Tare Modes
Tare function is used to cancel the weight of a box or a container in order to get the net weight result. Various tare modes are available. Refer to below paragraphs for details.
6.4.1 Manual Tare

1. Remove all loads from platform.
2. Make sure that the **Zero Indicator** is on. If not, press [ZERO].
3. Place container on platform.
4. Press [TARE].
5. Weight displayed will become zero and **Net Indicator** appears to indicate tare is in effect and weight being displayed is net weight.
6. To cancel tare effect, remove all loads from platform and press [TARE].
7. **Net Indicator** disappears. **Gross Indicator** appears to indicate tare effect has been removed and weight displayed is gross weight.

6.4.2 Auto Tare (F12)

3 parameters are available: - Off, Auto and Contin

- Off: - Auto tare disable.
- Auto: - instrument will assume the first stable weight (≥ 20d or 20d₁) applied is a container and will then tare off the weight of it automatically. When container is removed and gross weight result is zero, tare effect will be cancelled automatically.
- Contin (continuous auto tare): - all stable weight (≥ 20d or 20d₁) applied will be tare off automatically. When all loads are removed and gross weight result is zero, tare effect will be cancelled automatically.

6.4.3 Repetitive Tare (F13)

When F13 is set to OFF, this instrument does not permit multiple tare operation. Tare effect can only be cancelled when container is removed and gross weight is zero.

When F13 is set to ON, this instrument will permit multiple tare operation provided that **both** of the below requirements are met: -

a. The tare operation does not permit a reduction of the value of

---

11 Maximum tare (subtractive) = -Max for single range mode and dual weighing range/interval mode.
12 Set F12 = ON to enable Auto Tare Function
13 Set F13 = ON to enable Repeated Tare Function.
the tare, and
b. The tare effect can only be cancelled when there is no load on
the platform.

6.4.4 Preset Tare (F63)\textsuperscript{14, 15}

Preset tare allows a pre-determined tare weight value can be entered via
numeric keys.
During weighing mode and when weight is zero, press [0], then enter the pre-
determined tare weight value through numeric keys then press [PRINT/M+] to enter.

After the pre-determined tare value has been entered: -
- Instrument displays the preset tare value entered.
- Net indicator appears to indicate the value being displays is net
  weight.
- Preset Tare Indicator appears to indicate Preset tare mode is in effect.

To cancel preset tare effect: -
- Remove all loads from platform then press [TARE], or
- Enter a zero preset tare value then press [PRINT/M+].

Notes: -
- The pre-determined tare weight entered will be rounded to the nearest
division of the instrument. This does not affect the accuracy of the
subsequent weighing and operation.
- Manual tare is possible when Repetitive Tare (F13) is set to On.

6.5 Select the Preferred Function Mode\textsuperscript{16}

This instrument supports the below function modes. Abbreviation of each
function mode is bracketed.
- Weighing (Weigh).

\textsuperscript{14} Set F63 = ON to enable Preset Tare Function. Some countries may not consider preset
tare function as a legal for trade function. Contact your dealer for more information.
\textsuperscript{15} Set also F12 to Off
\textsuperscript{16} Depends on F11 setting.
• Piece Count (Count).
• Action-Tare-Memory (AtM).
• Animal Weighing (Ani).
• Quick access to Customer & Product Code Setting (PCd).

Press [FUNC/SET] until the abbreviation of the desired function mode appears then press [PRINT/M+] to enter.

The working mode employed before power off will be employed again automatically when re-powered on.

6.6 Weight Units
This instrument supports kg, g and lb. To shift among various weight units, repeat press and hold [MR/UNIT] to shift among various weight units.

6.6.1 Weight unit gram (g)
Disregarding to the setting of F9, weight unit gram (g) is available only when 3 or 4 decimal places (0.000 or 0.0000) is selected in F81. Contact your dealer for more information about this.

6.6.2 Select the preferred weight unit
The desired weight units should enable in F9. Repeat press and hold [MR/UNIT] until the preferred weight unit appears.

6.7 Memory Accumulation
There are 2 types of Memory Accumulation: -
   a. Automatic Accumulation mode, and
   b. Manual Accumulation mode.

Maximum accumulation limit is = 8 digits (e.g. 99999999) plus decimal (if any). Err 28 appears when maximum accumulation limit is exceeded.

---
17 Depends on F9 setting.
18 Changing weight unit during operation will clear all accumulate weight data from memory.
19 Only weight result will be accumulated.
6.7.1 Automatic Accumulation

Automatically accumulation is activated when Auto Accumulation is set to On in Auto 1, Auto 2, Auto 3 or Manual mode is selected in F16 and/or F17.

Under the automatic accumulation mode, corresponding results will be accumulated automatically.

6.7.2 Manual Accumulation

Manual Accumulation is activated when scanner, PC or CMD mode is selected for both F16 and/or F17.

Under the Manual Accumulation mode, press [PRINT/M+] to accumulate the current value to memory.

6.7.3 When data is accumulated to memory

1. When a result is accumulated to memory, this instrument displays “n____x”. M+ Indicator appears to indicate that memory contains stored data. “x” means the total number of transactions accumulated to memory.
2. This instrument returns to normal display status after 2 seconds.

6.7.4 Memory recall and clearance

Accumulation data will be stored in memory and will not be erased by normal power off (by pressing the [ON/OFF] key) process.

Instrument will automatically erase accumulation data stored when:
- Changing weight unit, or
- Change to another working mode, or
- A different operator number is entered during power on process.

---

20 Refer to 5.5.4 for setting details.
21 Refer to 5.5.3 for setting details.
22 Memory Accumulation Function accumulated weight results only.
23 When F16 and F17 is set to mode Auto1~3, unstable result or result which is less than 20d (20d₁ for dual weighing range/interval mode) will not be accumulated to memory.
24 All data stored will be erased when weight unit or working mode is changed.
Follow below procedures to recall and clear accumulation data manually.

2. Instrument flashes between “A____Y” (Y means the number of transactions accumulated) and total accumulated result.
3. At this point: -
   • Press [ZERO] to quit, or
   • Press [CE/x10] to clear memory. After [CE/x10] is pressed, instrument display Clear and M+ Indicator disappears to indicate no data is stored in memory.
5. Instrument flashes between “A____Y” (Y means the number of transactions accumulated) and total accumulated result.
6. At this point: -
   • Press [ZERO] to quit, or
   • Press [CE/x10] to clear memory. After [CE/x10] is pressed, instrument displays Clear and M+ Indicator disappears to indicate no data is stored in memory.

6.8 Extended Display Mode

When F68 is set to OIML or NTEP, by pressing [CE/x10] the weighing resolution will be temporary (for 5 seconds) changed to 10 times finer. Display keeps flashing when instrument is displaying the extended result.

6.9 Tri-color Backlight

This instrument is equipped with a tri-color backlight. The tri-colors are yellow, green and red.

• In normal operation, green is used for display illumination.
• When check function is activated, yellow = Lo; green = OK; red = Hi.

6.9.1 When powered by built-in rechargeable battery

Backlight will turn to minimum when weight remains stable / unchanged for 5 seconds. In order to save power, stable for backlight means ±5 division variation.

---

25 When F68 = OIML or NTEP.
6.9.2 When powered by external power adaptor
Backlight will remain on always.

6.10 Customer & Product Code
This instrument supports Customer and Product entry. Both Customer & Product Code accept numeric numbers, letters, symbols and any combination of these. Maximum code length = 18 digits. Refer to below table for code entry assignment.

<table>
<thead>
<tr>
<th>Key</th>
<th>Assignment</th>

Notes:
- When inputting upper case letters, the gross sign will appear.
- When inputting lower case letters, the decimal (or the psc) sign right to cursor will appear.
6.10.1 Enter a customer & product code manually

a. Go to customer/product code setting manual by either one of the below methods.
   - If Quick Manual Code Setting function (CPd) in F11 is set to on: -
     - Press [FUNC/SET] until C.P. Code appears then press [PRINT/M+].
     - Press [FUNC/SET] or [MR/UNIT] until the desired mode appears (select C Code to enter customer code or select P Code to enter product code), then press [PRINT/M+] to confirm.
   - If Quick Manual Code Setting function (PCd) in F11 is set to Off: -
     - Go to F19, then press [PRINT/M+].

b. Instrument displays H code followed by 6 digits. Enter the first 6 digits of the t code here, then press [PRINT/M+] to confirm.

c. Instrument displays M code followed by 6 digits. Enter the 7th ~ 12th digits of the code here, then press [PRINT/M+] to confirm.

d. Instrument displays L code followed by 6 digits. Enter the last 6 digits of the code here, then press [PRINT/M+] to confirm.

e. Instrument displays Plu=? At this point: -
   - Press the preferred PLU position (numeric key 0 ~ 9), then press [PRINT/M+] to save to that PLU position, or
   - Press [PRINT/M+] to utilize the code immediately but without saving to PLU, or
   - Press [ZERO] to quit.

f. To go to other internal function, press [FUNC/SET] or [MR/UNIT] or press [ZERO] to quite to operation status.

---

26 If a product code is less than 18 digits, press [Print/M+] to skip all blank digits displayed until instrument return to F19.
6.10.2 Enter a customer & product code by scanner
Default scanner input target is product code. To change scanner input target, scan either one of the below barcodes, then scan a customer or product barcode.

6.10.3 Clear a customer & product code entered
To clear a customer/product code entered, press [CE/x10] on above procedures b, c and d on paragraph 6.10.1.

6.10.4 Print a customer & product code entered
Once a customer/product code is entered, it will be printed automatically through the assigned comport. No other setting is required.

6.11 Quick Access PLU
10 each quick access PLUs are available for each of the below: -
   a. Weight limits for each of the weight unit (g, kg and lb).

27 Maximum = 18 digits.
28 Print format LAB 1 does not support customer/product code.
b. Quantity limit for Piece Count Mode.
c. Preset Tare value for each of the weight unit (g, kg and lb).
e. Product Code.

6.11.1 Weight limits PLUs
6.11.1.1 Save weight limits to PLU
Follow the below steps to save Lo and Hi weight limits to PLU.

1. Select desired operation mode and weight unit, then press [CHECK].
2. Instrument displays Low followed by a 6-digital value. Enter the Lo weight limit through numeric keys then press [PRINT/M+].
3. Instrument displays HIGH followed by a 6-digit value. Enter the Hi weight limit through numeric keys then press and hold [CHECK] for 2 seconds.
4. Instrument displays Save =?. At this point:
   - Press the preferred PLU position (numeric key 0 ~ 9), then press [PRINT/M+] to save to that PLU position and utilize these limits immediately, or
   - Press [PRINT/M+] to utilize these limits immediately but without saving to PLU, or
   - Press [ZERO] to quit.

6.11.1.2 Recall weight limits from PLU
Follow the below steps to recall Lo and Hi limits.

1. Select desired operation mode and weight unit, then press and hold [CHECK] for 2 seconds.
2. Instrument displays CHK =?. Press PLU position (numeric key 0 ~ 9) then press [PRINT/M+] to recall the Lo & Hi limits stored in that position.
3. Instrument displays Lo and Hi limits and these values are now effective.

6.11.1.3 Clear weight limits from PLU
Refer to 6.11.1.1. Enter zero value for both Lo and Hi limit in step number 2 and 3. Then press the preferred PLU position to clear.
6.11.2 Quantity limits PLUs

6.11.2.1 Save quantity limits to PLU

Follow the below steps to save Lo and Hi limits for quantity.

1. Go to piece count mode under desired weight unit, then press [CHECK].
2. Instrument displays Low followed by a 6-digital value. Enter the Lo quantity limit through numeric keys then press [PRINT/M+].
3. Instrument displays HIGH followed by a 6-digital value. Enter the Hi quantity limit through numeric keys then press and hold [CHECK] for 2 seconds.
4. Instrument displays Save =?. At this point: -
   - Press the preferred PLU position (numeric key 0 ~ 9), then press [PRINT/M+] to save to that PLU position and utilize these limits immediately, or
   - Press [PRINT/M+] to utilize these limits immediately but without saving to PLU, or
   - Press [ZERO] to quit.

6.11.2.2 Recall quantity limits from PLU

Follow the below steps to recall Lo and Hi limits.

1. Go to piece count mode under desired weight unit, then press and hold [CHECK] for 2 seconds.
2. Instrument displays CHK =?. Press PLU position (numeric key 0 ~ 9) then press [PRINT/M+] to recall the Lo & Hi limits stored in that position.
3. Instrument displays Lo and Hi limits and these values are now effective.

6.11.2.3 Clear quantity limits from PLU

Refer to 6.11.2.1. Enter zero value for both Lo and Hi limits in step number 2 and 3. Then press the preferred PLU position to clear.
6.11.3 Preset Tare PLUs

6.11.3.1 Save preset tare to PLU

Follow the below steps to save preset tare value.

1. Select desired operation mode and weight unit.
2. Enter preset tare value through numeric keys then press and hold [TARE] for 2 seconds.
3. Instrument displays Save =?. At this point:
   - Press the preferred PLU position (numeric key 0 ~ 9), then press [PRINT/M+] to save to that PLU position, or
   - Press [PRINT/M+] to utilize this preset tare immediately but without saving to PLU, or
   - Press [ZERO] to quit.

6.11.3.2 Recall preset tare from PLU

Follow the below steps to recall preset tare value.

1. Select desired operation mode and weight unit, then press and hold [TARE] for 2 seconds.
2. Instrument displays PT =?. Press PLU position (numeric key 0 ~ 9) then press [PRINT/M+] to recall the preset tare value stored in that position.
3. Preset tare value stored is now effective.

6.11.3.3 Clear preset tare from PLU

Refer to 6.11.3.1. Enter zero value for both Lo and Hi limits in step number 2. Then press the preferred PLU position to clear.

6.11.4 Customer & product code PLUs

6.11.4.1 Save a customer/product code to PLU

Refer to 6.10.1 for procedures to save a customer/product code to PLU.

6.11.4.2 Recall a customer/product code from PLU

Follow the below steps to recall a customer/product code from PLU.

1. Select desired operation mode and weight unit, then press and hold the PLU position (numeric key 0 ~ 9) then press [PRINT/M+] to recall the product or customer code stored in that position.
2. Press **[FUNC]** or **[UNIT]** until the desired mode appears (select C Code for customer code or select P Code for product code), then press **[PRINT/M+]** to confirm.

3. Code stored is now effective.

6.11.4.3 Clear customer / product code from PLU
Refer to 6.10.1 and enter blank value for all H, M and L codes in step numbers b, c, and d. Then press the preferred PLU position to clear.

6.12 Enter a Key Command by Scanner
Simply scan one of the below barcodes to simulate pressing the **[ZERO]**, **[TARE]** and **[PRINT/M+]** on keyboard.
7. Weighing Mode
   1. Refer to 6.6 on how to select the desired weight unit.
   2. If zero weight cannot be obtained when unloaded, press [ZERO]. After [ZERO] is pressed, the Zero Indicator will appear. 
   3. Always place an object onto platform gently. Excessive force/shock applied to platform may cause un-recoverable damage to the weight sensor inside platform.
   4. The weight of the object is displayed automatically.
   5. It is a good practice to remove all loads from platform after weighing. It will prolong the life of the weight sensor.

8. Piece Count Mode
   1. Refer to 6.5 on how to select the desired weight unit.
   2. If a container is used, place it onto the platform and press [TARE].
   3. Apply samples with the known quantity (sample size) on platform.
   4. Press and hold [FUNC/SET] then input the sample quantity through numeric keys then press [PRINT/M+].
   5. This instrument will calculate, store the average piece weight and confirm with 2 beeps. The quantity is then displayed.
   6. Add to or remove from the platform, the corresponding quantity will be displayed automatically.
   7. To count different articles, press and hold [FUNC/SET] and repeat procedures listed above.

8.1 Auto Unit Piece Weight Enhancement Function
In order to obtain the best counting result and minimize sampling error, this instrument is equipped with Auto Unit Piece Weight Enhancement Function.

This function will automatically be employed when Unit piece weight is determined by actual sample method.

Auto Unit Piece Weight Enhancement Function is built-in the Piece Count mode. This function starts automatically when all of the below are met: -

29 Maximum weight value can be zero depends on F65 setting. Contact your dealer for detail.
8.2 Shift among Quantity, Average Piece Weight and Weight Info

1. Repeat press and hold [MR/UNIT] to shift among quantity, average piece weight and weight info.
2. Quantity display format = numeric numbers & PCS (e.g. 1000 PCS).
   Average piece weight display format = numeric numbers & weight unit &/PCS (e.g. 499.960g/PCS).
3. Weight display format (when Piece Count Function is in effect) = numeric numbers & weight unit & PCS (e.g. 500 kg PCS).

8.3 Recall the Average Piece Weight before Powered Off

Press and hold [FUNC/SET] for 2 seconds, then press [MR/UNIT] to recall the last average piece weight before instrument was powered off.

9. Action-Tare-Memory (ATM)

9.1 Description of ATM Mode

It means action, then tare, then memory: -

- Action = load or remove weight from weighing platform.
- Tare = the above weight added on or removed from will be tare off automatically.
- Memory = the above weight will be added to or deducted (in case of removal) from accumulated memory.

9.2 Basic ATM Settings

1. Refer to 6.6 on how to select the desired weight unit.
2. Enter ATM mode.
3. Press and hold [FUNC/SET] to trigger Auto Accumulation target. Then to select Auto Accumulation target by pressing [FUNC/SET] or
[MR/UNIT], then press [PRINT/M+].

- Gross = Gross weight will be accumulated.
- Net = Net weight will be accumulated.

4. Instrument prompts for delay time (second). Delay time is the time interval (00 ~ 99 seconds): -
   - Between a valid stable weight result is obtained and before it is tare off and accumulated to memory.
   - Display time of total accumulated weight result (after all loadings are removed) and before it is clear from print out memory.

5. Enter delay time through numeric keys then press [PRINT/M+] to enter.

6. At this point, ATM mode is ready for use.

9.3 Start Using ATM

1. Apply container on platform. Instrument will tare off the weight of the container.

2. Apply or removed load on or from platform. The weight result is displayed for the time interval set forth by above point 2. Then instrument will accumulate the weight result in memory then clear it from the display. **Notes:** -
   - Both positive and negative weight will be accumulated to memory.
   - Positive weight will be added to the accumulated memory.
   - Negative weight will be deducted from the accumulated memory.

3. Apply/remove another load on/from platform. The weight result is displayed for the time interval set forth by above point 2. Then instrument will accumulate the weight result in memory and clear it from the display.

4. Repeat point 3 until all weighing sequence is completed.

5. To recall current total accumulated weight, press [MR/UNIT].

6. At this point: -
   - Press [ZERO] to quit, or
   - Press [PRINT/M+] to print the current accumulated weight.

30 Weight changed less than 10d will not be processed.
7. When all loads are removed from weighing platform. Total accumulated weight value will then be erased automatically.

9.3.1 Weight Check Control for ATM
When weight Check Control is in effect, only weights within Lo and Hi limits will be tare off and accumulated.

9.3.1.1 Comport settings of weight Check Control for ATM when an external peripheral is connected to instrument.
   a. Set F26 (near zero value) according to application requirement or 00000 to disable near zero value control. Refer to 12.1 for more information about F26 near zero function.
   b. Refer to 5.5.4 on comport settings and set Check Control = On.
   c. In ATM mode, refer to 11.1 to enter Lo and Hi limits.

9.3.1.2 Settings of weight Check Control for ATM when no external peripheral is connected to instrument.
   a. Set both Comport 1 and Comport 2 to Off.
   b. Set F26 (near zero value) according to application requirement or 00000 to disable near zero value control. Refer to 12.1 for more information about F26 near zero function.
   c. At this point, ATM comport setup is completed for this mode.

10. Animal Weighing Mode
10.1 Description of Animal Weighing Mode
Animal weighing mode is used to weigh live animals.

10.2 Basic Animal Weighing Settings
1. Refer to 6.6 on how to select the desired weight unit.
2. Enter Animal Weighing mode.
3. Press and hold [FUNC/SET] to trigger filter setting. Then select the preferred filter speed by pressing [FUNC/SET] or [MR/UNIT]. 5 filter

31 Animal Weighing function will not operate when weight is less than 20d (or 20d₁ for dual weighing range/interval).
speed are available from (FLt 1 ~ FLt 5).

- FLt 1 = Fast (Weight value is based on least number sampling data, accuracy will be lowest).
- FLt 3 = Normal (Displayed average weight is calculated based on the last 8 internal readings).
- FLt 5 = Slow (Weight value is based on most number of sampling data, accuracy will be highest).

4. Press [PRINT/M+] to save and set weight release variation value.
5. Press [FUNC/SET] or [MR/UNIT] key to select the preferred weight release variation value. 10 parameters are available from Off to 20: -
   - rE oFF = auto release disabled.
   - .........
   - rE 2 = auto release when weight varies ≥2% of rate capacity or W1 for dual weighing range/interval mode).
   - .........
   - rE 20 = auto release when weight varies ≥20% of rate capacity (or W1 for dual weighing range/interval mode).

7. Instrument is now ready for animal weighing application.

10.3 Start Using Animal Weighing
1. Get an animal on platform.
2. This instrument will calculate the weight of an animal. The result obtained will be flashing.
3. In case more animals have to be weight in the same transaction, then get other animals on platform. An updated weight will be calculated and displayed\(^{32}\) as above step 2.
4. To update the weight reading manually, press [CE/x10].

\(^{32}\) Provide that extra weight added/removed fulfills the weight release variation value listed on point 5 of 10.2.
11. Check Function

This function is used to compare current weight result with the preset Lo and Hi limits. The comparison results (LO, OK, HI) will then be displayed in different backlight colors with or without buzzer. Targets of Check mode are:

- Weighing mode = weight value.
- Piece Count mode = piece value.
- Auto Tare Memory mode = weight value.

11.1 Set Lo & Hi Limits

Follow the below steps to set Lo and Hi limits.

1. During desired operation mode, press [CHECK].
2. Instrument displays Low followed by a 6-digital value. Enter the Lo limit through numeric keys then press [PRINT/M+] to save.
3. Instrument displays HIGH followed by a 6-digital value. Enter the Hi limit through numeric keys then press [PRINT/M+] to save.
4. Check Mode is now enabled. The check result is shown by one of the backlight colors. Check results are also sent to Control Output Port.

11.2 Hints for entering Lo and Hi Limits

1. For normal comparison, set both Lo and Hi limits.
2. To check only if result is lower than or equal to Lo (result ≤ LO), set Hi limit = 0.
3. To check only if result is higher than or equal to Hi (result ≥ HI), set Lo limit = 0.
4. To check if result is equal to a specified value, set both Hi limit and Lo limit = the specified value.

33 Check mode will not operate when weight is less than 20d (or 20d1 for dual weighing range/interval mode).
34 Set also F15 for desired Check buzzer output.
35 When F25 = Mode 1, set also F26 (Near Zero weight value).
36 Set F26 to zero.
37 Set F15 for preferred buzzer output configuration.
38 Yellow = Lo; Green = OK; Red = Hi.
11.3 Cancel Check Function
To cancel check function, press [CE/x10] on point 2 and 3 of 11.1.

12. Dynamic Check Mode
Check function mode also supports dynamic applications which within the below specifications listed.

a. Maximum belt speed: - 30 meter per minute.
b. Maximum accuracy: - 3000d.
c. Maximum speed: - 30 pack per minutes.

This instrument supports near zero function. Enter near zero value in F26. It is recommended that this value is = 70% of the target weight value. Refer to 12.1 for details.

12.1 Near Zero Function Description
Near zero value is very useful for dynamic and conveyor weighing applications. It is used to avoid false LO signal output when load is approaching and leaving the weighing platform.

HI/OK/LO comparison will only start when weight reading exceeds the preset near zero value. Refer to below diagram for more illustration.

39 Set preferred near zero weight value in F26. By default, system will ignore any near zero which is less than 20d. If it is the case, system will deem 20das near zero weight value.
After Hi, Lo limits and near zero value have been entered, this instrument is ready for dynamic checking.
13. Communication & Outputs

13.1 Print Output & Formats
If Manual is selected in F16 and/or F17, refer to 5.5.3.1 (Lab 1), 5.5.3.2 (Lab 2) and 5.5.3.3 (LP-50/TSC) for details.

13.2 Auto 1~3 Output & Formats
If Auto 1~3 is selected in F16 and/or F17, refer to 5.5.4 for details.

13.3 PC Output & Protocol
If PC is selected in F16 and/or F17, refer to Appendix B for protocol details.

13.4 Sending Keyboard Commands from Computer
When Comport 2 is assigned as CMD, keyboard commands can be sent by an external device to this instrument. Refer to Appendix A for details.

13.5 Requesting Operation Results & System Parameters by Computer
To obtain operation results and system parameters by computer, set F17 to CMD.

- Refer to Appendix C for details to obtain operation results.
- Refer to Appendix D for details to obtain system parameters.

13.6 PC Software (Rathohan 19 End User Program)
A PC software is built to work with this instrument. This software enables users to perform:
- Real Time Operation Status Monitoring
- Operation Parameters Setting
- Real Time Process Monitoring
- Individual and Totalized Record Storage
- Database File Output

---

40 Instrument should be re-started (by power off then power on again) after F16 and/or F17 setting is changed under normal operation status.
Click / visit the below link to download this software and operation manual of it.

14. Printing Formats
14.1 Lab 1 Print Format

When Lab 1 is selected, output in default format will be generated with printed data sent. No header will be generated when line number is set = 00. See below table for print format and explanations.

14.3 Customizing Lab 2 Print Format
Custom printout is available for the below modes:

- Weighing.
- Auto-Tare-Memory.
- Piece Count.
- Animal weighing.

---

43 When Lab 2 is selected under in F16 and/or F17
19 variants + 2 commands (Cr LF and End) are available for custom print output format. Refer to the below Print output format variants table for more detail.

14.3.1 Print output format variants table

14.3.2 To edit custom Lab 2 print output format

Follow the below steps to create custom printout.

a. Go to internal function and select the desired function number to edit,
b. Select CUSTOM and press [Print/M+],
c. This instrument displays Line 1 and the last variant or command (see 14.3.1 for details) stored,
d. Press [Print/M+] to confirm or select other variant or command by press [FUNC/SET] or [MR/UNIT]. Then press [Print/M+] to confirm and save,
e. This instrument displays Line 2 and the last variant or command stored,
f. Repeat steps d and e for other lines,
g. To finish editing, select command End, then press [Print/M+] to confirm.
h. This instrument returns to and displays the current internal function number,
i. If required, repeat steps a to h to create and edit custom printout format for other modes.

14.4 Lab 3 Print Format

Current working mode and all related data are sent under this mode. Refer to below table for data output format.

<table>

</tr>
</tbody>
</table>

| Date of 1st Printout |
| Time of 1st Printout |

Accumulation No., Gross Weight and Net Weight or Pieces

Total Accumulation No. and Total Net Weight or Pieces

---

45 When Lab 4 is selected under in F16 and/or F17.
14.6 Lab 5 Print Format
Transaction data is sent in journal output format with time and net weight of each individual transaction. Refer to below diagram for details.

![Data Explanation](image)

**15. Label Printing**
This instrument supports the below label printer models:
- LP50 by Datecs ([www.datecs.bg/en](http://www.datecs.bg/en))
- TDP247, TDP345 by TSC ([www.tscprinters.com](http://www.tscprinters.com))
- TTP247, TTP345 by TSC ([www.tscprinters.com](http://www.tscprinters.com))

**Notes:**
- Set all preferred operation parameters according to F16 and/or F17 listed on 5.4.
- Refer to Appendix E for TSC printer installation and setup procedures.
- Refer to Appendix F for detail on how to create and upload label to TSC printer by Bartender Label software.

**Cautions:**
1. Do not combine data of different working modes on the same label.
2. Do not print any labels of non-current working mode. This will retrieve wrong data of non-current working mode.

---

46 When Lab 5 is selected under in F16 and/or F17.
3. Print only label data when the same working mode in operation.
4. Do not combine data of various working modes on same label. This will retrieve wrong data of non-current working mode.

15.1 Label Format Groups & Label File Names

2 label format groups are available, these are:
- FL1 (label file group 1), and
- FL2 (label file group 2).

15.1.1 FL1 (Label Format Group 1)

FL1 (format group 1) is for current transaction data printing (during normal working status).

100 printout selections (00 ~ 99) are available in format group 1. In order to trigger the preferred label to be printed, label files stored in printer for this format group 1 must have a file name of AA00, AA01, AA02, AA03… AA99.

- FL1 00: - Select this to disable current transaction label printing.
- FL1 01: - Select this to print label file AA01 stored in printer.
- FL1 02: - Select this to print label file AA02 stored in printer.
- ....
- FL1 98: - Select this to print label file AA98 stored in printer.
- FL1 99: - Select this to print label file AA99 stored in printer.

15.1.2 FL2 (Label Format Group 2)

FL2 (format group 2) is for totalized (MR) data printing (during normal working status).

100 printout selections (00 ~ 99) are available in format group 2. In order to trigger the preferred label to be printed, label files stored in printer for this format group 1 must have a file name of BB00, BB01, BB02, BB03… BB99.

- FL2 00: - Select this to disable totalized (MR) data label printing.
- FL2 01: - Select this to print label file BB01 stored in printer.
- FL2 02: - Select this to print label file BB02 stored in printer.
• ....
• **FL2 98**: Select this to print label file BB98 stored in printer.
• **FL2 99**: Select this to print label file BB99 stored in printer.

15.2 Label Programming
Prompt commands, information description, working mode and suggested length on label are listed on the below table.

**Caution**: Do not combine information of different working mode on the same label.

### 15.2.1 Label programming information table

<table>
<thead>
<tr>
<th>Prompt Command (^{47})</th>
<th>Description</th>
<th>Working Mode (^{48})</th>
<th>Suggested Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>b</td>
<td>Product Code</td>
<td>All</td>
<td>18</td>

</tr>
<tr>
<td>y</td>
<td>Weight hold without unit or decimal</td>
<td>Animal Weighing</td>
<td>6</td>
</tr>
<tr>
<td>Z</td>
<td>Customer Code</td>
<td>All</td>
<td>18</td>
</tr>
</tbody>
</table>

---

\(^{49}\) Each working mode has its own HI Limit format (weight for weighing & auto tare memory mode; pieces for piece count mode; % for percentage mode). If HI Limit has to be printed, set HI Limit value under the preferred working mode.

\(^{50}\) Each working mode has its own LO Limit format (weight for weighing mode & auto tare memory; pieces for piece count mode; % for percentage mode). If HI Limit has to be printed, set HI Limit value under the preferred working mode.
15.2.2 Label programming sample

15.2.2.1 Sample label of current transaction (FL1)

15.2.2.2 Sample label of totalized data (FL2)
15.3 Quick Access to Label Settings

If label printer is selected either for Comport 1 or Comport 2, follow the below procedures to access quick label settings during operation.

1. Press and Hold [FUNC/SET].
2. Instrument displays F1.
4. Instrument displays label file number (FL1 01 ~ FL1 99) to print in label format group 1. Press [FUNC/SET] or [MR/UNIT] until the preferred label file number appears then press [PRINT/M+] to save.
5. Instrument displays label file number (FL2 01 ~ FL2 99) to print in label format group 2. Press [FUNC/SET] or [MR/UNIT] until the preferred label file number appears then press [PRINT/M+] to save.
6. At this point, label settings are completed.

15.4 Repetitive Printout

This Instrument supports repetitive printout under Manual print mode. Press [PRINT/M+] for additional printout copies.

Conditions and criteria as below:

a. When Auto Accumulation is set to On: Repetitive print is only possible when the actual weight on scale is equal to the weight value of the 1st printout.

b. When Auto Accumulation is set to Off: Repetitive print is possible if minimum output weight set is matched and when [PRINT/M+] is pressed.

c. Weight value of repetitive printout will not change the total accumulation result. Only the weight value of the 1st printout will be accumulated to memory.
16. Built-in Battery & Recharging

16.1 Battery Operation Time
Remaining battery power of the built-in rechargeable battery is displayed by the Battery Power/Level Indicator.

16.2 Symbols & Remaining Power

- Full Battery: ≥ 6.3V.
- 2 Blocks: ≥6.0V (Battery level~75%).
- 1 Block: ≥5.7V (Battery level~20%).
- Frame only: < 5.7V (Battery level is less than 15%).

16.3 Battery Recharge
When appears, it means that the built-in rechargeable battery is at low voltage status. It is recommended to recharge as soon as possible.

To protect the built-in rechargeable battery, this instrument will be powered off automatically when battery is at extremely low level. If this is the case, do not attempt to power this instrument on. Recharge this instrument immediately. Fail to do so may cause unrecoverable damages to the built-in rechargeable battery.

Battery charging status is shown by the Battery Power/Level Indicator:
- Progressing: - Recharging in process.
- Flashing : - Recharge completed.

Battery recharge is possible while operating. Overcharge protection circuit is inside to prevent battery damages from overcharge.

Notes:
- This instrument will auto power on when an energized power adaptor is plugged in.
- The backlight remains switched on when an energized power adaptor is plugged in.
### 17. Error Codes

<table>
<thead>
<tr>
<th>Error Code No.</th>

</tr>
</tbody>
</table>
UndEr | Negative Weight values exceeds display range
---|---
Reboot | Important parameters have been changed. Power off and then power on instrument again to reboot.
| Negative Tare value exceeds display range

18. Daily Care & Maintenance

1. Clean the instrument with a soft, damp cloth. If necessary, use a mild detergent in water.
2. Do not use any harsh, abrasive material, acetone, volatile solvent, thinner or alcohol for cleaning.
3. Verify the accuracy of this instrument periodically. Re-calibrate if necessary. In some countries, calibration requires authorized/qualified agent. Contact your dealer for more information.
4. Store this instrument in a dry and clean place.
5. Recharge battery before and every 4 months during long time storage.

19. Downloading All Appendixes

For environment protection and information updating speed, all Appendixes of this manual are listed on the full manual version which is available for download at:

www.fi-measurement.com/resource/manuals
20. Appendix A: - Keyboard Commands

Keyboard commands can be sent to this instrument from computer through any standard communication program to simulate keyboard entries.

To enable keyboard commands, connect the external peripheral which generates keyboard commands to Comport 2 and set Comport 2 to CMD. Keyboard Command format as below:

a. Hex code 0D (CR), then
b. Hex code 0A (LF) then
c. Letter shown on below illustration diagram, then
d. Space (Hex code 20).

---

51 Keyboard commands are case sensitive.

### Data Code Details:
- **Comma**: `,` (used to separate data fields)
- **Polarity Sign**: `+` (positive), `-` (negative)
- **Control Command**: `ETX`, `EOT`, `STX`, `START` (end of text, end of transmission, start of text, start of file)
- **Line Feed (LF)**: `0x0A`
- **Start of Heading (SOH)**: `0x01`
- **ASCII Equal Sign (DEC 61, HEX 3D)**: `=`
- **Net Weight**: `NT` (Net weight)
- **Gross/Net Weight**: `G/N`
- **Reversed 7 digits weight value including location of decimal point**: `R`
- **Status Code**: `S`
- **Status Word A**: `SP`
- **Status Word B**: `SWA`
- **Status Word C**: `SWB`
- **Weight Unit**: `U`

### Notes:
- **Weight Unit**
  - `k` = kilogram
  - `lb` = pound
  - `g` = gram
  - `sp` = space

22. Appendix C: - Operation Result Commands

Operation Result commands are those commands which are used to request operation result and details from this instrument. These commands can be sent to this instrument from computer through any standard communication program. Command format as below: -

   e. Hex code 0D (CR), then
   f. Hex code 0A (LF), then
   g. Command code listed on below command table, then
   h. Space (Hex code 20).

Refer to below table for commands details.

<table>
<thead>
<tr>

23. Appendix D: - System Parameter Inquiry Commands\textsuperscript{54}

System parameter inquiry commands are used to check system parameter settings. Command format as below:

- a. Hex code 0D (ASCII code $0D), then
- b. Hex code 0A (LF) (ASCII code $0A) then
- c. Command code listed on below table (all commands are case sensitive), then
- d. Hex code 20 (ASCII code $20).

E.1 Before Installation

Get the below ready before printer installation.

1. An appropriate cable to connect printer and computer. This cable usually comes with the printer. If not, contact your printer supplier.

2. Printer installation driver. This driver usually comes with the printer. If not, contact your printer supplier.

3. Diagnostic tool for printer. This tool usually comes with the printer. If not, contact your printer supplier or download it at: -
   www.fi-measurement.com/resource/driversnsoftwares

4. TCF file for printer. The suitable TCF file can be downloaded at: -
   - For TDP247 and TDP345: -
     www.fi-measurement.com/resource/driversnsoftwares
   - For TTP247 and TTP345: -
     www.fi-measurement.com/resource/driversnsoftwares

E.1.1 Printer Installation

1. Turn off the printer, connect the appropriate cable, and then turn on the printer.

2. If the printer supports Plug-and-Play, and you have connected it using a USB or Parallel cable, then the Windows Add Hardware Wizard will automatically detect the printer and display a dialog that allows you to install a driver. Click Cancel and do not install the driver using this wizard.

3. Run the Driver Wizard utility from the Installation Directory where the driver files are located.

4. Select Install Printer Drivers and complete the wizard.

5. The driver should now be installed.
E.1.2 Uploading TCF File to Printer

In order to allow proper operation between this instrument and TSC label printer, a TCF file must be uploaded to printer.

1. Connect printer with computer.
2. Power on printer.
3. Download the correct TCF file point 4 of E.1.
4. Unzip the download file and save in to computer.
5. Run Diagnostic tool for printer.
6. Click on Command Tool.
7. Click on Send file.
8. Double click on the TCF file and it will be uploaded to printer automatically.
25. Appendix F: - Create & Upload Label to TSC Printer

F.1 Selecting the Correct Edition for Bartender Software
To enable label uploading from computer to TSC printer, it is necessary to run as Bartender as Automation or Enterprise Automation edition. Procedures as below: -

1. Install Bartender Software to computer. The Bartender software usually comes with the TSC printer. If not, please contact your printer supplier.
2. Run Bartender, then click on Help, then click on Edition Selection.
3. Select Enterprise Automation or Automation, then click OK.
4. At this point, correct Bartender edition is selected.

F.2 Adding Information from Instrument to Label & Uploading to a TSC Printer
The below procedures are based on Bartender Label Software. If a different label creating software is used, contact your label software for more details if in doubt.

1. Create the foundation of a label by Bartender. All information to be obtained from instrument should be added afterward.
2. Once the label foundation has been completed; (a) click on File and (b) select Export Printer Code Template.
3. On Print System; (a) select TSC KP-100/200 (Flash) and (b) select to Port.
4. Click More Option.
5. Then (a) click Print Dialog Data Sources, then (b) click on Format ID/Name.
6. On Template Field, select Template Field for Type.
7. Enter the correct label file name on Name/Value. Refer to 15.1 for correct file name format.
8. (a) click Copies, check KDU and (b) input asterisk (*) on Prompt box.
9. Below procedures explain how to edit information to be obtained from instrument.
10. Click Template Object Data Sources and Select the object which information from instrument (for example net, gross, tare weight and product code) to be sent to printer and printed on label.
11. Double click on the preferred data source to which variant(s) has/have to add.
   (a) check the box below External Keyboard, then
   (b) enter the appropriate command on the Prompt Box (refer to 15.2.1 for command detail).
12. Select Auto on the Source box under Template Field
13. Repeat point 11 to ~ 12 for all other data sources.
14. Click OK.
15. Click Export. In case of Verification Messages appear, select one of method on the dialogue box to fix and click Continue.
F.3 Sample Label
Sample label (for TSC printer) on right is available for download at: - www.fi-measurement.com/resource/driverssoftwares
